

Controlling body announces approval for increased shelf life of Epiprotect

The Company's notified body has announced that increased shelf life, from 1 to 3 years, for the products in the Epiprotect series is approved. The approval was obtained after audit of necessary tests and documentation.

ECM is the Company's notified body and is in accordance with the EU directive for medical devices, responsible for the Company's compliance of the rules of the directive. As previously announced, the products in the Epiprotect-series have received CE-mark after approval of ECM.

The Company has performed all necessary tests to further increase the shelf life to 5 years and intends to submit an application to ECM shortly, to have the documentation approved.

A long shelf life is of strategic importance since it both facilitates an efficient production process at the same time as it is being requested from distributors to further incentivize keeping of a larger stock.

"There is currently a long waiting time for all types of regulatory approvals in Europe which has delayed this announcement. We are however happy that we now have a longer shelf life on these products since it will facilitate our sales as it reduces the risk for expiring products with our distributors." Says the Company's CEO Petter Sivlér.
